TRUSTWORTHY TRACEABILITY IN LOCAL DAIRY PRODUCTION

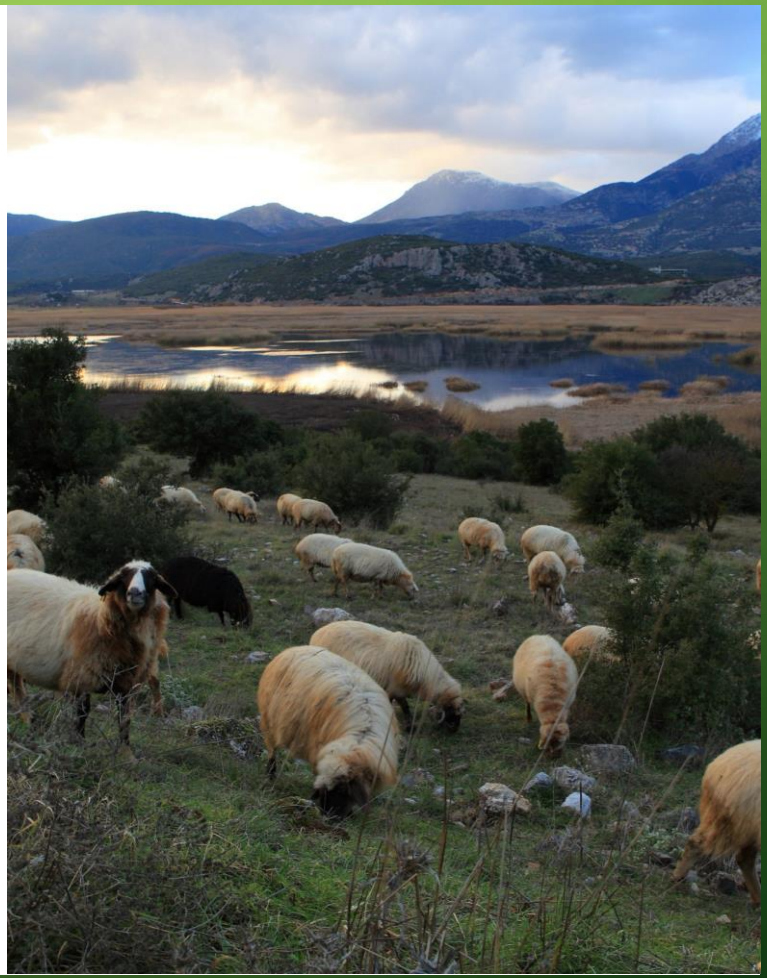
through:

BLOCKCHAIN

and

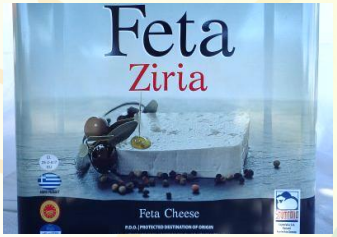
PROCESS MONITORING

FAIRCHAIN



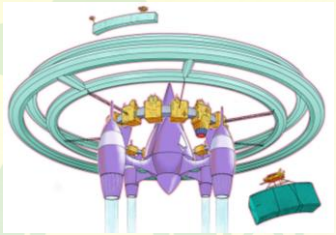
BLOCKCHAIN OFFERS TRUSTWORTHY INFORMATION IN LOCAL DAIRY PRODUCTION

Transparent information on food quality, integrity, and origin are increasingly demanded by consumers!



Information from milk collection and cheese production is captured and registered in **Blockchain.**

Key product traits can be derived from operational parameters.



Production of **PDO Feta cheese** and **sheep yoghurt** has been analysed and modelled.

A Blockchain infrastructure for all food chain actors can improve consumer confidence and sales.

The **platform** for registration and retrieval of trustworthy traceability information on Feta cheese production is **available**.

Funded by the European Union
